

INTRODUCING Formbird FLEET

Formbird and Formbird FLEET.
Open. Flexible. Built to fit.

WHO IS FORMBIRD?

Australian Software Company

Formbird is an Australian software company. We build and support our own platform. We are not reselling someone else's product. That matters because it gives no real control ever over how the system evolves and how it is configured for each customer.

Open & Practical Approach

Our approach is open and practical. We work closely with customers, listen to feedback, and refine the solution around real business needs. We are direct, responsive, and easy to deal with.

Low-Code Technology

The platform is robust by design. It is built on best-of-breed open technologies. Formbird's low-code approach means it can be configured to suit different organisations, workflows, and priorities without forcing everyone into the same mould.

Local Local Local

Formbird is local.
Local development.
Local support. Local understanding that gives customers confidence that the people behind the software are accessible, accountable, and invested in the outcome.

WHAT IS FORMBIRD FLEET?

Modern Fleet Management

Formbird FLEET is a modern fleet management solution.

It brings fleet information into one place. Assets, maintenance, compliance, bookings, inspections, reporting, and related workflows can all sit within a single connected system.

Designed to Reduce Friction

It is designed to reduce friction. Less chasing information. Less duplication. Less reliance on disconnected spreadsheets, paper forms, and separate systems. More visibility. More control. Better decisions.

Flexible For Any Organisation

Formbird FLEET is flexible enough to support different fleet environments. It can be configured for councils, government agencies, and other asset-heavy organisations. It is fully integrated with GPS/telematics, key management, and existing corporate systems where needed.

Organisation-Wide Access

It works across the organisation. Managers, workshop teams, drivers, and field staff can all access the information they need on mobile, tablet, or desktop.

At its core, Formbird FLEET is about clarity. Clearer information. Clearer workflows. Clearer accountability.

A fleet system that can adapt as your organisation changes.

Some of our customers

Why we love Formbird FLEET

FLEET Professionals Community

Formbird FLEET is shaped by the people who use it every day.

Our Fleet Professionals Community brings councils and fleet teams together to share ideas, solve problems, and learn from each other.

Customer feedback helps guide practical improvements, keeping Formbird FLEET relevant, useful, and focused on real fleet operations.

Pool Car Booking - Keylocker

Key management on autopilot.

Staff can book available vehicles online, reducing the need for spreadsheets, manual handling, and confusion about who has which vehicle.

With KeyWatcher inside Formbird FLEET, authorised drivers can securely collect assigned keys, while bookings, returns, and audit trails are recorded in the system.

Geotab Telematics / GPS

Formbird FLEET uses Geotab telematics to provide better fleet visibility.

Vehicle data such as location, odometer readings, engine hours, fuel consumption, engine faults and driver behaviour can support maintenance, safety, utilisation, and reporting.

Together, Formbird FLEET and Geotab help councils make smarter decisions using real operational data.

A Single Connected System: Assets, maintenance, compliance, reporting.

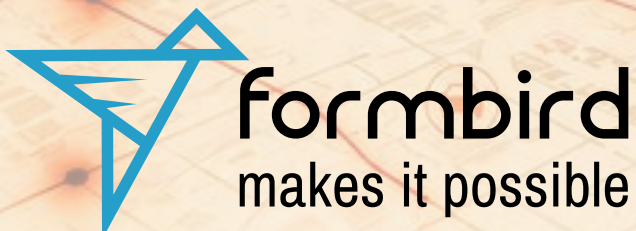

Reduce Friction: Fewer spreadsheets, less duplication.

Adaptable Workflows: Low-code technology means configuration, not code.

Local Australia-Based: Development, Support, and Understanding.

Works Across the Organisation: Accessible on mobile, tablet, and desktop.
